

The background is a dark, almost black, space filled with a dense, chaotic web of thin, glowing blue lines. These lines radiate from a central point, creating a starburst or nebula-like effect. The lines vary in brightness and thickness, giving a sense of depth and movement. A small, bright blue star or light source is visible at the center of the composition.

Mission Savanna

Roller Coaster
By Leah

The Coaster Design

The coasters design is started off with a big hill then goes into a loopy loop. Then small bumps and then another big hill that goes underground that pops up into a hill and then a huge loopy loop.

The roller coaster will take 10 people per cart and there will be 3 carts.

Safety

The roller coaster has lap bars and buckles, it will also have bars that go over your shoulder. The roller coaster will have strong sides and a strong front and back.

This roller coaster will be for people that are 11 and up.

Cart Design

The cart is basically a lion. The front is a lion head the back has a tale and paws in front and in back of the wheels that are in the middle of the paws.

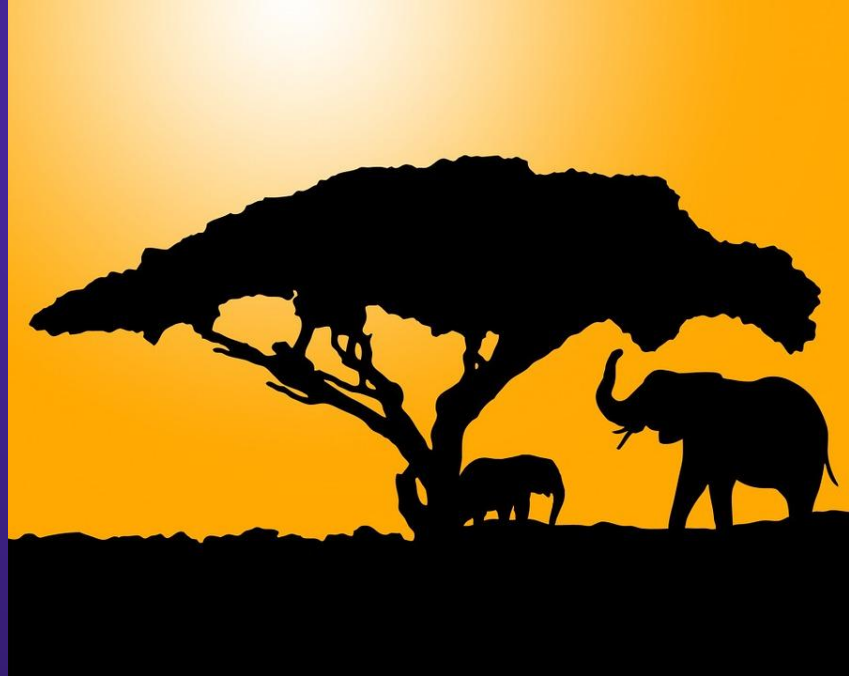

The cart will be longer and look different, this is just a example.

Background

The background is animals and savanna trees like the acacia tree. The animals and trees might be made out of metal, steel or tin foil/aluminum foil.

The background will be realistic.

Enjoy!

I hope you enjoyed our presentation. Hopefully someday you will see it in animal kingdom at Disney World! If you do see and go on it it try to not throw up on it!
